

## hillcraft Undergoing FSC Chain of Custody Certification

In 2008, **hillcraft** made it our goal to become a FSC Chain of Custody Certified manufacturer. There were several proponents to this decision.

- ✓ Our livelihood, both professionally and personally, depends on the continued health and growth of the nation's forests. They are one of the few truly renewable resources, and should be treated with care.
- ✓ We recognize that the construction industry has a reputation for poor environmental awareness. **hillcraft's** goal is to do everything we can to reduce the industry's environmental impact.
- ✓ We are proud to participate in LEED certified projects, which frequently require FSC Certification.

### How will YOU benefit from hillcraft's FSC Certification?

- ✓ FSC certified products are harvested responsibly from properly managed forests, where community and worker rights are a priority.
- ✓ Having a casework and millwork manufacturer that can fulfill all of your environmental and quality requirements, from LEED to FSC to AWI-QCP.
- ✓ Assurance that **hillcraft** will continue to adhere to the FSC's requirements with regular audits of our manufacturing facility.
- ✓ Ability to offer clients and owners the option to use environmentally friendly products that are also beautiful, durable and affordable.
